**Stemato enables closer communication
between the OR and SPD**

Manage Instruments

During the entire sterilization process Stemato helps to minimize risk

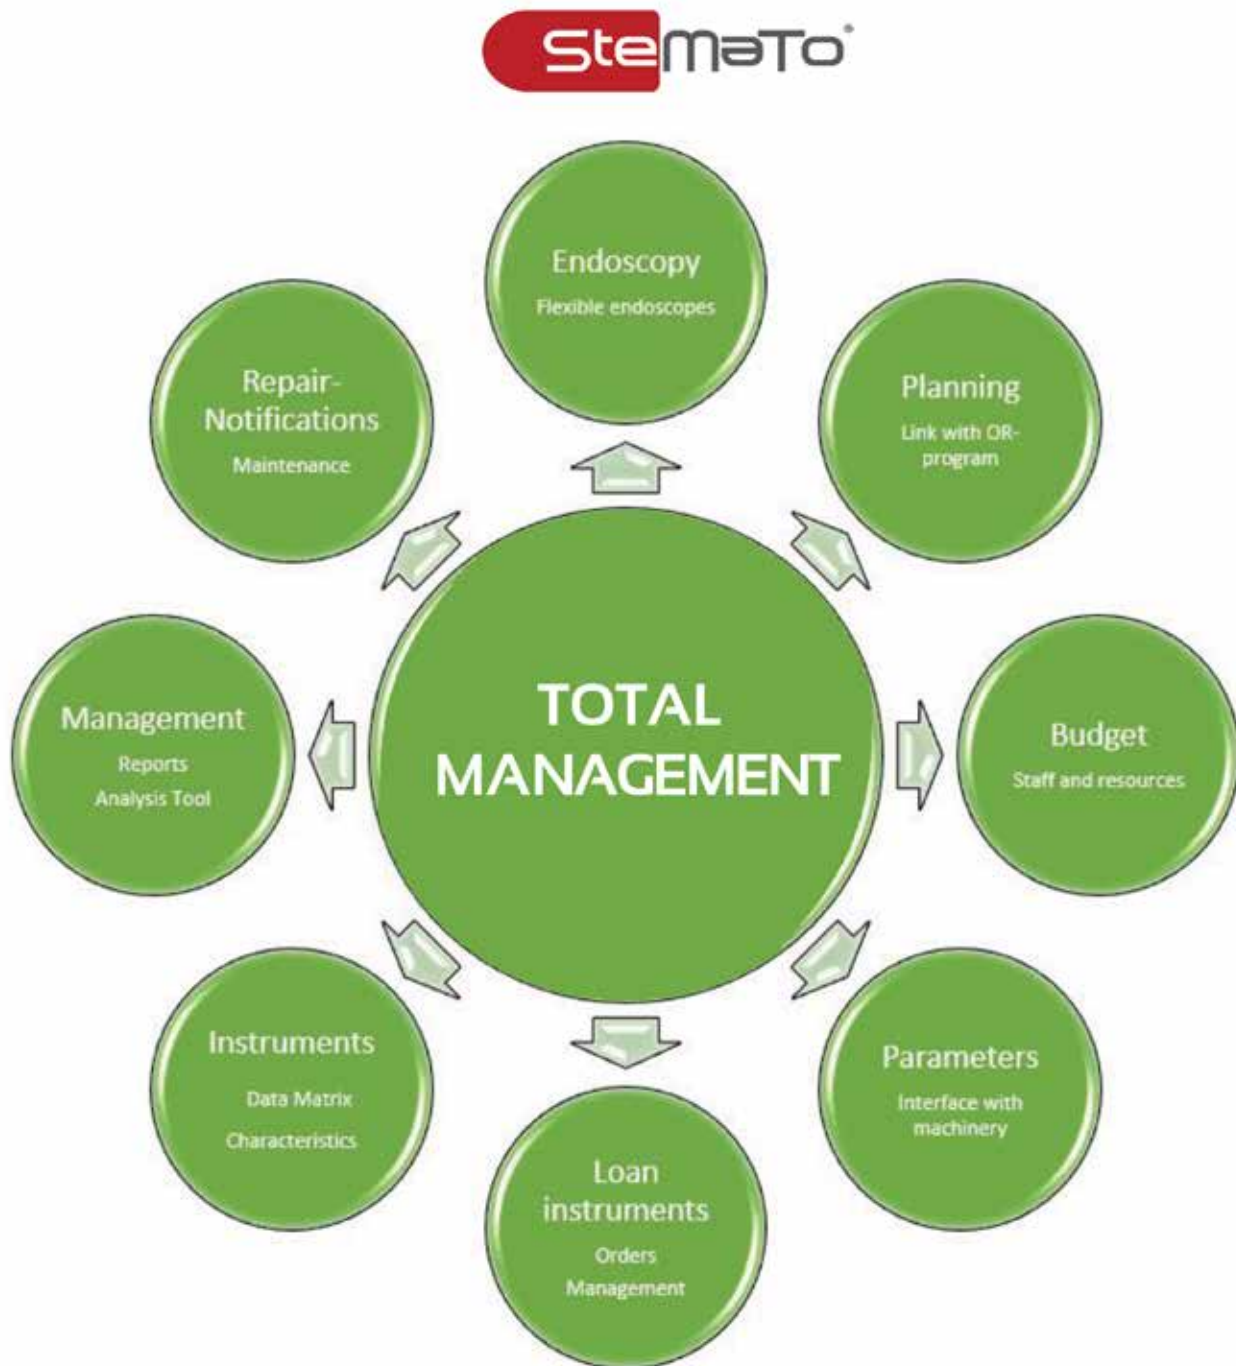

From start to finish **Stemato** provides information needed throughout all stages of the instrument cycle. From the OR, to cleaning, to the patient, each step is monitored to minimize error and increase SPD reliability.

Stemato allows for more efficient production cycles and greater inventory control. Communication between OR and SPD is imperative for total

success in instrument management.

Stemato allows the OR team to input remarks into the software during the surgical procedure (when needed). For example, if an instrument is damaged during surgery or for flagging TSEs (Transmissible Spongiform Encephalopathies), the team can enter a remark for that specific instrument or set(s). **Stemato** will alarm the SPD to follow the hospital procedures.
